Exame da Língua Inglesa

1ª Época
90 Minutos

Esta prova contém vinte e seis (26) perguntas. Responda-as na sua folha de respostas.

Section I: Read the text carefully and then answer the questions below according to the information given in the text. (There are 5 marks for this section)

The development of science and technology has brought new developments in the area of medicine. An important development in medicine was the invention of anesthesia. According to the history of medicine, many years ago, if one was to go for a surgery operation, this person had to be beaten with a hammer to faint. They, then would operate on him/her. It was painful and risky since in some occasions patients never recovered from the fainting! Nowadays, before any surgery the person gets an injection of anesthesia, which makes him/her feel nothing during the surgery. It is easier than the hammer method!

Modern medicines also invented incubators. Incubators are small containers used for keeping premature babies alive. Many years ago, if children were born prematurely, they died, because of lack of medical aid. Nowadays, if a child is born prematurely, he/she is put in an incubator, an environment close to his/her mother's womb.

Another important development in medicine was the invention of vaccination. Modern vaccines can prevent diseases through vaccination. Many diseases like polio and small pox have been eradicated because of vaccination. In Mozambique there are many vaccination campaign against different diseases like malaria.

Adapted Inglês 9a Classe

Glossary
